

Exhibit C: December 14, 2022 Zongol Capital Program

Prepared for: Memorandum to the Village Board of Tuxedo Park **Engineer:** Joseph “Joe” Zongol, Weston & Sampson **Record:** Capital & Infrastructure Project Status Update, December 14, 2022

Executive finding

The Village Engineer’s contemporaneous year-end memorandum documented an active and coordinated infrastructure program before the end of the McFadden administration. It recorded nine work streams involving dam safety, sewer rehabilitation, water-main replacement, treatment-plant compliance, pressure monitoring, district metering, and stormwater mapping.

Project-status map

Project track	Status recorded in December 2022	Significance at transition
Dam safety	Inspections completed for Tuxedo Lake, Pond No. 3, and Wee-Wah; dams generally sound; Wee-Wah operating deficiencies under temporary control and long-term consultation	Condition assessments and follow-up work were active
Trunk-sewer investigation	Investigation completed for approximately \$49,520 against a \$91,600 budget	Approximately \$42,080, or about 46%, below the investigation budget
SSS sewer rehabilitation	Work completed in six road areas; EFC grant and financing used; remaining capacity directed to Pond No. 3-area trunk repairs	Demonstrates construction progress, outside funding, and productive use of remaining capacity
Tuxedo Lake water main	Nearly 80-year-old critical main; design nearing completion and moving toward Department of Health permitting	Project was advancing toward construction readiness
Mountain Road-area water mains	Scope included Mountain Road, Schoolhouse Road, Schoolhouse Lane, Circle Drive, and Spartan Place; field investigation underway	Established an active design pipeline
Water Treatment Plant	Response to Health Department concerns submitted; clearwell modifications and plant-capacity adjustment proposed	Regulatory and engineering response underway
Pressure monitoring	Recording gauge selected for the Town pressure-reducing-valve station	Operational investigation aimed at pressure spikes and main breaks
District metering	Water-used-versus-water-billed analysis underway in the Mountain Farm, Camp Comfort, and Ivy Road area	Water-loss control initiative underway
Stormwater mapping	DPW and Weston & Sampson planned system mapping over the following six to twelve months	Mapping planned to support drainage and green-infrastructure planning
