

Exhibit E: Infrastructure Chronology by Administration

Prepared for: Memorandum to the Village Board of Tuxedo Park

Attribution standard

Each row identifies the documented project phase. Initiation, authorization, financing, design, management, and later continuation are treated as distinct actions.

Chronology

Administration and period	Project or action	Amount	Description and attribution
McFadden/Hansen, 2005–2007	Police Department control reforms	Not a capital amount	BST credited McFadden and Hansen with corrective anti-fraud and internal-control measures
Guinchard–Guazzoni, April 2015	Causeway Wall settlement BAN	\$135,000	Pre-July 2017 financing
Guinchard–Guazzoni, May 2015	DPW loader financing	\$104,000	Five-year equipment financing
Guinchard–Guazzoni, December 2015	Police vehicle financing	\$38,626	Five-year vehicle financing
Guinchard–Guazzoni, April 19, 2017	Club House and Continental Road reconstruction	\$300,000	Fifteen-year bond authorization before McFadden mayoralty
Guinchard–Guazzoni, April 19, 2017	Water distribution and dam-related work	\$606,000	Thirty-year authorization before McFadden mayoralty
Guinchard–Guazzoni, April 19, 2017	Wee-Wah Dam rehabilitation	Up to \$2,970,000	Planned, designed, permitted, bid, awarded, and financed before July 2017
Transition, June 22, 2017	Wee-Wah Dam, roads, and water financing closing	Approximately \$3.65 million	Closing occurred before McFadden became Mayor
McFadden, July 2017–2023	Inherited Wee-Wah Dam project	Existing financed project	Administration managed the inherited construction and later operating deficiencies
McFadden, 2017–2023	Trunk-sewer investigation	Approximately \$49,520 against \$91,600 budget	Completed approximately \$42,080 below budget
McFadden, 2017–2023	SSS sewer rehabilitation	\$531,750 estimate; grant up to \$132,938	Work completed in six road areas; remaining capacity directed to Pond No. 3-area trunk repairs
McFadden, 2017–2023	Tuxedo Lake water-main replacement	Amount not stated in this exhibit	Design of critical aging main nearing completion and moving toward permitting
McFadden, 2017–2023	Mountain Road-area water-main replacement	Amount not stated in this exhibit	Field investigation and design advanced
McFadden, 2017–2023	Water Treatment Plant compliance and clearwell work	Amount not stated in this exhibit	Regulatory and engineering response advanced
McFadden, 2017–2023	Pressure monitoring and district metering	Amount not stated in this exhibit	Operational controls initiated to identify pressure problems and water loss
McFadden, 2017–2023	Dam inspections	Amount not stated in this exhibit	October 2022 reports issued for Tuxedo Lake, Pond No. 3, and Wee-Wah
McFadden, October 2021	DPW Freightliner and hydraulic spreader	\$148,031	Five-year tax-exempt lease purchase
McFadden, October 2021	Police interceptor	\$47,895	Five-year tax-exempt lease purchase
Citrin, March 3, 2025	Pond No. 3 bridge replacement	Up to \$250,000	Successor-Board authorization
Citrin, March 3, 2025	Sewer-system improvements	Up to \$650,000	Successor-Board authorization

Administration and period	Project or action	Amount	Description and attribution
Citrin, March 3, 2025	Water-system improvements	Up to \$4,500,000	Three ayes, Trustee Paul Brooke voted against, and one trustee was absent; authorization did not pass
Citrin, March 10, 2025	Water-system improvements reconsidered	Up to \$4,500,000	Successor Board adopted a new serial-bond authorization with a 40-year period of probable usefulness

Wee-Wah Dam award and inherited responsibility

While serving as Trustee, David McFadden voted against awarding the low bid for the Wee-Wah Dam project because, according to his firsthand account, the company had never built a dam before. According to his firsthand recollection, the Board approved the low bidder by a 3–2 majority despite his opposing vote. The project’s planning, financing, bidding, and award preceded his July 2017 mayoralty. His administration inherited responsibility for managing the project and later deficiencies. The 2022 engineering record described the dam as generally sound while identifying valve-shaft, stop-log, and operating concerns under temporary control and long-term engineering consultation.
