

Exhibit J: Certified Water and Sewer Plant Management

Prepared for: Memorandum to the Village Board of Tuxedo Park **Administration:** Mayor David C. McFadden

Executive finding

The McFadden administration addressed the need for reliable certified operation of the Village's water and sewer plants by considering outside operating firms and retaining VRI Environmental Services. The Board unanimously hired VRI to manage both plants beginning June 1, 2022. The Village announcement states that VRI supplied trained and certified facility managers, operators, mechanics, and technicians, maintained a physical day-to-day presence, and coordinated with government agencies.

Mayor McFadden states that the Village previously lacked sufficient in-house certified personnel for reliable operation of both plants, that multiple outside firms were interviewed, and that the new arrangement brought regulatory notices to the Board more promptly, reduced exposure to avoidable fines, and improved the technical information available for repair decisions. Those operational-history statements are presented as his firsthand account.

Chronology and evidence

Date or period	Event	Significance
Spring 2022	Administration considered outside plant-operating firms	Comparative selection process described by McFadden
May 18, 2022	Board agenda listed discussion of hiring VRI following the prior month's executive session	Formal Board consideration documented
May 31, 2022	Village announced unanimous hiring of VRI Environmental Services to manage both plants	Firm, scope, and Board action documented
June 1, 2022	VRI service began	Effective date documented
Beginning June 2022	VRI supplied certified managers, operators, mechanics, and technicians; maintained daily presence; interfaced with agencies	Operating and compliance structure documented
2022 reporting year	Village water system reported compliance with applicable operating, monitoring, and reporting requirements and no violation of a maximum contaminant level or other water-quality standard	Contemporaneous compliance result; not presented as proof of sole causation
December 2022–January 2023	VRI participated in troubleshooting Filter No. 2 with DPW and Westech	Demonstrates technical coordination under the operating model

Board-memo significance

The documented record supports the statement that the McFadden administration professionalized plant operations through certified outside management, an on-site presence, maintenance capability, and agency coordination. The statements about prior notification delays, avoided fines, and the interview process remain expressly attributed to Mayor McFadden.
